

**Engineering and Design
ROCK FOUNDATIONS**

Table of Contents

Subject	Paragraph	Page	Subject	Paragraph	Page
Chapter 1			<i>Section III</i>		
Introduction			<i>Laboratory Testing</i>		
Purpose	1-1	1-1	General	3-13	3-4
Applicability	1-2	1-1	Selection of Samples and Tests	3-14	3-4
References	1-3	1-1	Laboratory Tests	3-15	3-5
Scope of Manual	1-4	1-1	Chapter 4		
Coordination	1-5	1-1	Rock Mass Characterization		
Chapter 2			Scope	4-1	4-1
Design Considerations			Intact Rock versus Rock Mass	4-2	4-1
Design Approach	2-1	2-1	<i>Section I</i>		
Types of Structures	2-2	2-1	<i>Geologic Descriptions</i>		
Design Considerations	2-3	2-1	General	4-3	4-1
Factor of Safety	2-4	2-1	Rock Core Descriptors	4-4	4-1
Chapter 3			Supplemental Descriptors	4-5	4-5
Site Investigations			Index Tests	4-6	4-6
Scope	3-1	3-1	<i>Section II</i>		
Applicable Manuals	3-2	3-1	<i>Rock Mass Classification</i>		
<i>Section I</i>			General	4-7	4-6
<i>Preliminary Studies</i>			Available Classification Systems	4-8	4-6
General	3-3	3-1	Rock Quality Designation	4-9	4-7
Map Studies	3-4	3-1	Geomechanics Classification	4-10	4-8
Other Sources of Information	3-5	3-1	Q-System	4-11	4-8
Field Reconnaissance	3-6	3-1	Value of Classification Systems	4-12	4-9
<i>Section II</i>			<i>Section III</i>		
<i>Field Investigations</i>			<i>Shear Strength</i>		
General	3-7	3-2	General	4-13	4-9
Geologic Mapping	3-8	3-2	Rock Failure Characteristics	4-14	4-9
Geophysical Explorations	3-9	3-2	Failure Criteria	4-15	4-10
Borings	3-10	3-3	Shear Strength Tests	4-16	4-12
Exploratory Excavations	3-11	3-4	Shear Strength Testing Program	4-17	4-12
In-Situ Testing	3-12	3-4			

Subject	Paragraph	Page	Subject	Paragraph	Page
Selection of Design Shear Strength Parameters	4-18	4-14	Intact Rock Mass	6-4	6-1
			Jointed Rock Mass	6-5	6-1
			Layered Rock Mass	6-6	6-3
<i>Section IV</i>			Highly Fractured Rock Masses	6-7	6-3
<i>Deformation and Settlement</i>			Secondary Causes of Failure	6-8	6-3
General	4-19	4-17			
Moduli Definitions	4-20	4-18	<i>Section II</i>		
Test Methods for Estimating Modulus	4-21	4-18	<i>Methods for Computing Bearing Capacity</i>		
Other Methods for Estimating Modulus	4-22	4-20	General	6-9	6-3
Considerations in Selecting Design Modulus Values	4-23	4-20	Definitions	6-10	6-3
Selection of Design Moduli	4-24	4-21	Analytical Methods	6-11	6-3
			Bearing Capacity Equations	6-12	6-4
			Eccentric Load on a Horizontal Foundation	6-13	6-6
<i>Section V</i>			Special Design Cases	6-14	6-7
<i>Use of Selected Design Parameters</i>					
General	4-25	4-21	<i>Section III</i>		
			<i>Allowable Bearing Capacity Value</i>		
Chapter 5			General	6-15	6-7
Deformation and Settlement			Determination	6-16	6-8
Scope	5-1	5-1	Structural Limitations	6-17	6-9
<i>Section I</i>			<i>Section IV</i>		
<i>Categories of Rock Mass Deformation</i>			<i>Treatment Methods</i>		
General	5-2	5-1	General	6-18	6-9
Time-Dependent Deformations	5-3	5-1	Effective Unit Weight	6-19	6-9
Time-Independent Deformations	5-4	5-2	Foundation Depth	6-20	6-9
<i>Section II</i>			Chapter 7		
<i>Analytical Methods</i>			Sliding Stability		
General	5-5	5-2	Scope	7-1	7-1
Closed Form Methods	5-6	5-2			
Numerical Models	5-7	5-5	<i>Section I</i>		
			<i>Modes of Failure</i>		
<i>Section III</i>			General	7-2	7-1
<i>Allowable Settlement</i>			Potential Failure Paths	7-3	7-1
General	5-8	5-5			
Mass Concrete Structure	5-9	5-5	<i>Section II</i>		
			<i>Methods of Analysis</i>		
<i>Section IV</i>			General Approach	7-4	7-1
<i>Treatment Methods</i>			Conditions for Stability	7-5	7-3
General	5-10	5-6	Assumptions	7-6	7-3
Rock Mass Improvement	5-11	5-7	Analytical Techniques for Multi-Wedge Systems	7-7	7-4
Foundation Design Modifications	5-12	5-7	Preliminary Procedures	7-8	7-6
			Analytical Procedures	7-9	7-6
Chapter 6			Design Considerations	7-10	7-6
Bearing Capacity			Seismic Sliding Stability	7-11	7-8
Scope	6-1	6-1	Factor of Safety	7-12	7-9
Applicability	6-2	6-1			
			<i>Section I</i>		
<i>Section I</i>			<i>Failure Modes</i>		
<i>Failure Modes</i>			General	6-3	6-1
General	6-3	6-1			

Subject	Paragraph	Page	Subject	Paragraph	Page
<i>Section III</i>			Analyses for Tension Anchor		
<i>Treatment Methods</i>			Systems	9-6	9-2
General	7-13	7-9	Dowels	9-7	9-3
Increase in Shear Strength	7-14	7-9	Design Considerations	9-8	9-3
Increase in Passive Wedge			Chapter 10		
Resistance	7-15	7-9	Instrumentation		
Lateral Restraint	7-16	7-9	Scope	10-1	10-1
Chapter 8			<i>Section I</i>		
Cut Slope Stability			<i>Planning Considerations</i>		
Scope	8-1	8-1	General	10-2	10-1
<i>Section I</i>			Program Initiation	10-3	10-1
<i>Modes of Failure</i>			Cost Control	10-4	10-1
General	8-2	8-1	Types and Number of Instruments	10-5	10-1
Types of Failure Modes	8-3	8-1	<i>Section II</i>		
Sliding Failure Modes	8-4	8-1	<i>Applications</i>		
Toppling Failure Mode	8-5	8-3	General	10-6	10-2
Sloughing Failure Mode	8-6	8-3	Cut Slope Instrumentation	10-7	10-2
Additional Factors Influencing Slope			Foundation/Structure		
Stability	8-7	8-3	Instrumentation	10-8	10-3
<i>Section II</i>			<i>Section III</i>		
<i>Methods for Assessing Stability</i>			<i>Types of Instruments and Limitations</i>		
General	8-8	8-4	General	10-9	10-5
Sliding Stability Analyses	8-9	8-4	Piezometers	10-10	10-5
Toppling Stability Analyses	8-10	8-6	Ground Motions/Vibrations	10-11	10-5
Localized Sloughing Analyses	8-11	8-6	Limitations	10-12	10-7
Physical Modeling Techniques	8-12	8-6	<i>Section IV</i>		
Design Considerations	8-13	8-7	<i>Data Interpretation and Evaluation</i>		
<i>Section III</i>			Reading Frequency	10-13	10-7
<i>Treatment Methods and</i>			Automatic Data Acquisition		
<i>Planning Considerations</i>			Systems	10-14	10-9
General	8-14	8-7	Data Presentation	10-15	10-9
Treatment Methods	8-15	8-7	Data Evaluation	10-16	10-9
Planning Considerations	8-16	8-8	Data Use	10-17	10-9
Chapter 9			Chapter 11		
Anchorage Systems			Construction Considerations		
Scope	9-1	9-1	Scope	11-1	11-1
<i>Section I</i>			<i>Section I</i>		
<i>Modes of Anchor-Rock Interaction</i>			<i>Excavation</i>		
General	9-2	9-1	Information Requirements	11-2	11-1
Tensioned Anchor Systems	9-3	9-1	Excavation Methods	11-3	11-1
Untensioned Anchor Systems	9-4	9-1	Effects of Discontinuities on		
<i>Section II</i>			Excavation	11-4	11-5
<i>Methods of Analysis</i>					
General	9-5	9-2			

Subject	Paragraph	Page	Subject	Paragraph	Page
<i>Section II</i>			<i>Section I</i>		
<i>Dewatering and Ground Water Control</i>			<i>Karst, Pseudokarst, and Mines</i>		
Purposes	11-5	11-5	Cavities in Rock	12-2	12-1
Planning Considerations	11-6	11-5	Investigations	12-3	12-2
Dewatering Methods	11-7	11-6	Alternative Solutions	12-4	12-3
<i>Section III</i>			<i>Section II</i>		
<i>Ground Control</i>			<i>Swelling and Squeezing Rock</i>		
Stability Through Excavation			General	12-5	12-5
Planning	11-8	11-7	Rebound	12-6	12-5
Selection of Stabilization Measures	11-9	11-8	Cation Hydration	12-7	12-5
Stabilization Methods	11-10	11-8	Chemical-Reaction Swelling	12-8	12-7
<i>Section IV</i>			Loss of Internal Strength	12-9	12-9
<i>Protection of Sensitive</i>			Frost Action	12-10	12-9
<i>Foundation Materials</i>			Design Considerations	12-11	12-9
General	11-11	11-9	<i>Section III</i>		
Common Materials Requiring			<i>Soil-Rock Contacts</i>		
Protection	11-12	11-9	General	12-12	12-9
Determination of Protection			Weathering Profiles	12-13	12-9
Requirements	11-13	11-9	Design Considerations in Weathering		
Foundation Protection Methods	11-14	11-9	Profiles	12-14	12-13
<i>Section V</i>			Appendix A		
<i>Excavation Mapping</i>			References		
<i>and Monitoring</i>					
Mapping	11-15	11-10			
Photography	11-16	11-10	Appendix B		
Construction Monitoring	11-17	11-11	Rock Mass Classification Tables		
Chapter 12					
Special Topics					
Scope	12-1	12-1
